Dear Parents,

CVMS will be conducting a spinal screening for scoliosis on April 18<sup>th</sup> for 8<sup>th</sup> grade boys. Abnormal spinal curvature is usually noticed at the beginning of the adolescent growth spurt. Often early detection and appropriate treatment can prevent progression of the curve. The screening procedure takes about 30 seconds, but will require the student to remove his/her shirt in order to have the spine visually observed by the school nurse. Girls may be screened wearing swimsuits, halter tops or a bra. Students will be screened in the nurse's office in pairs.

If a deviation is noted or suspected, you will be notified by a mailed referral and instructed to take your child to a physician for evaluation. **If your child is currently under active treatment for a spinal condition or if you DO NOT want to have your child screened, please fill out the form below and return it to school with your child as soon as possible.** If your child does not return a form signed by a parent, I will assume that they may be screened.

Sincerely,

*Tara Hahn, RN*
